# Create a Culture of Infection Control Awareness

Poster

**Educate**

Training Card

**Reinforce**

Button

**Promote**

Label

**Remind**

**Nosocomial infections are responsible for approximately 20,000 deaths in the U.S. each year. Approximately 10% of American hospital patients (about 2 million every year) acquire a clinically significant nosocomial infection.**

The Joint Commission on Accreditation of Healthcare Organizations (JCAHO) has been heightening the awareness that a nosocomial infection, resulting in death or permanent injury/loss of function, should be treated as a sentinel event.

As a result, JCAHO surveyors are now looking for evidence that health care facilities are aggressively focused on decreasing nosocomial infections – our tools help to demonstrate your commitment to Infection Control.

**Our Infection Control Campaign provides;**

- Great tools to increase staff, patients', and visitors' awareness of infection control
- Illustrations that remind and internalize infection control techniques for everyone
- Graphic tools for staff to help insure compliance with JCAHO's National Patient Safety Goals for Infection Control
- A great reminder of the CDC's hand washing guidelines

# Poster

## Educate staff, patients, and visitors on the importance of hand washing with our Preventing Infection Poster

Our Preventing Infection Poster helps to break the cycle of infection by educating every possible source of a hospital acquired infection. It creates within the organization a Culture of Infection Control Awareness.

Our poster not only educates doctors and nurses (who have a better understand of hospital infections), but also the many other individuals who have contact with patients and who may directly or indirectly serve as a reservoir for infection.

Patients who forget to wash their hands after using the bathroom, well intended and helpful visitors, staff from dietary and any other number of other individuals who may have direct or indirect contact with patients can benefit from this educational tool. This poster is a an ongoing reminder that hand washing is important.

**Our full-color posters are available in 2 sizes: 16 x 20" and 24 x 36" and can be purchased with 3 different finishes:**

1

### Laminated:

Color poster gloss laminated on both sides with adhesive mounting squares.

2

### HealthTex: Repositionable Adhesive Fabric:

Color poster printed on our exclusive HealthTex™ adhesive fabric. It's waterproof and tearproof and features repositionable adhesive that will never lose its ability to stick. Plus it won't damage paint or wood and can be used both indoors and out.

Best Value!

3

### Laminated and Mounted:

Color poster mounted to 3/16" white foam core with a laminated crystal matte finish. Poster includes adhesive mounting squares. Framing is also available.

# Preventing Infection

**I Wash Because I Care**

### WHY

Clean hands are the single most important factor in preventing the spread of pathogens and antibiotic resistant bacteria in healthcare settings. Hand hygiene reduces the incidence of healthcare associated infections and is considered the corner stone of good infection control.

### WHEN

1. Before and after every patient contact
2. Whenever hands are visibly dirty.
3. After removal of gloves.
4. Following any contact with blood or body fluids (e.g. venepuncture, handling urinary catheters and other invasive devices).
5. After any microbial contamination (e.g. wound examination, wound dressing, sputum aspiration etc.).
6. Before performing a sterile procedure
7. After visiting the toilet.
8. After handling laundry.
9. Before preparing, handling or eating food.

### HOW

Your hand washing technique is more important than the solution used. Keep nails short and clean. Wrist and hand jewelry should be removed where possible to facilitate decontamination of the hands, wrists and forearms, and to reduce bacterial counts. False nails and nail varnish should not be worn, as they and the nails may harbour micro-organisms and become detached. Before washing, expose the wrists and forearms—all parts of the hands must be included in the process.

- Wet hands under warm running water
- Apply soap or antiseptic gel/foam approved by your hospital
- Rub all parts of the hands vigorously, without applying more water:
  - 10-15 seconds for routine hand washing
  - 2 minutes for surgical hand washing
- Rinse hands under warm running water
- Dry thoroughly using disposable paper towels (sterile towel for surgical hand wash)
- Alternatively for antiseptic gel/foam:
  - Apply 5mls (one squirt) of antiseptic gel/foam to clean hands for routine decontamination and rub until dry
  - Apply two applications of antiseptic gel/foam for surgical procedures and rub until dry

## Button & Training Card

### Train Your Staff and Promote a Culture of Infection Control Awareness with our Button and Training Card.

Our 2-1/4" hand washing button is printed in full-color and features a bulldog clip so that it can be easily attached to a identification badge or uniform lapel. The button is a great tool to get an "emotional" buy in from your staff. When they wear the button they are making a "promise" to their patients "I Wash Because I Care".

Our Hand Washing 101 Training Card is printed in full-color on two sides and is designed to reinforce good hand washing techniques. This card is die-cut so that it can be displayed on the door handle of every exam and hospital room, bathroom, and utility room. As a result, hand washing is continuously reinforced. This card is also ideal for staff in nutritional services, housekeeping, and other departments that can benefit from a reminder to wash their hands.

Button shown attached to training card.
